

GaleWrap

Oriented stretch film

Lowers Wrapping Cost

Innovative high-strength composition enables less film per load

Reduces Waste

Unique manufacturing technique ensures less product waste

Improves Load Performance

Contracts around load post-wrapping providing stability throughout the transportation cycle

Simplifies Use

Lightweight design with easy application minimizes repetitive motions

GaleWrap

Oriented stretch film

GaleWrap oriented stretch film, unlike conventional hand film, provides optimal load protection, while increasing wrapping productivity. GaleWrap can be used either by hand or in conjunction with GaleWrap Automation Concepts.

Features and benefits

■ Improves load containment

GaleWrap is manufactured with a proprietary process resulting in film contraction post-application. This coupled with superior puncture resistance provides improved load containment, enabling reliable performance throughout the transportation cycle.

■ Minimizes consumable costs and product waste

As an oriented film, GaleWrap doesn't neck down during wrapping, allowing operators to use fewer revolutions to provide maximum product protection, while reducing overall expenses. Plus, GaleWrap features hemmed edges, enabling use of the entire roll, ensuring zero product waste.

■ Reduces operator fatigue

Lightweight rolls and easy application minimize potential injuries due to heavy lifting and repetitive motions. Further simplifying application, GaleWrap corners are secured by simply tugging at the edges, which provides secure load containment.
